

DWBI

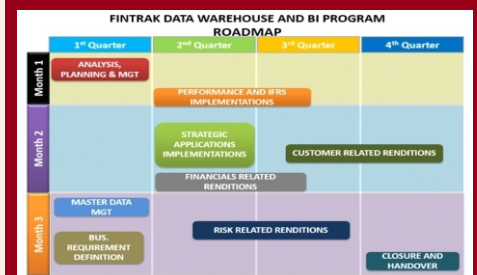

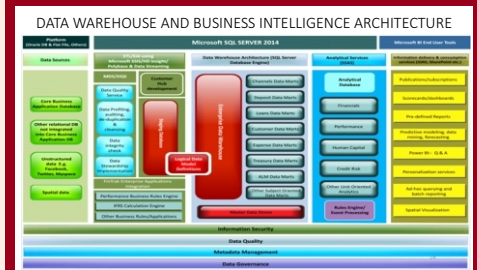

DATA WAREHOUSING BUSINESS INTELLIGENCE AND ANALYTICS SOLUTION

FinTrak DWBI solution and implementation approach ensures a comprehensive delivery of automated tools designed to dramatically simplify data integration, including the creation, maintenance, and expansion of data warehouses, data marts, and operational data stores. With an ETL Module that can acquire data across disparate platforms. Employs efficient access techniques to produce high-quality data, a reusable infrastructure, and comprehensive metadata.

BENEFITS

- Immediate access to information at all levels within and outside the bank in a scalable, affordable, secured business intelligence environment.
- The Data Warehouse and Business Intelligence platform will give the Bank even greater capacity to combine reporting, analysis and data from disparate applications, systems and data bases to transform an overwhelming volume of diverse data into a concise, intuitive analytical environment where users across the Bank can filter, sort and present information for action
- BI users can create their own custom reports with no need for extensive IT consulting
- The platform is highly scalable to meet your growing demands
- Users have anytime, anywhere access to reports and dashboards through browser-based tools and mobile devices
- Flexible and optimized reporting, publishing tools, triggers and email alerts
- Reduction of Monthly Performance Report processing time for all SBUs and improve TAT by providing current month performance results simultaneously without necessarily closing previous period.
